

Group Assignment

Yihao Lim

Group Project – 35%

With the rise in data exfiltration during ransomware attacks came a rise in “shaming” websites, which are leveraged by threat actors to extort victims into paying the ransom.

Shaming websites are used by threat actors as a tool to publicly name victims and post stolen data in an effort to extort them into paying the ransom demand.

From Jan to Sep 2026

1. What countries are most Targeted By Ransomware Actors? **[1 Point]**
2. Why are some countries more targeted than others? **[1 Point]**
3. Which ransomware group is the most prolific or successful? **[3 Points]**
4. What is so unique about these ransomware actors' TTP that makes them so "successful"? **[3 Points]**
5. Is it common for threat actors to "re-brand" or "repurpose" older data leaks or public breaches to inflate their reputation? **[2 Points]**
6. Does victim company size or revenue puts them at higher / lower risk of attacks by ransomware actors? **[2 Points]**
7. Which Industries Are More Prone To Ransomware Threats? Why? **[3 Points]**
8. We know actors target sensitive data, but what kind of data do actors usually target? What are the kinds of data targeted in each industry? Show a breakdown comparing types of data stolen. **[5 Points]**
9. Share 3 interesting insights you observed. **[9 Points]**
10. Share lessons learnt, what were your struggles in executing the project and how did you overcome them? **[1 Point]**

Submission Criteria

Arial Font Size 11, Limit to 10 Pages

- Grading criteria = Use of Visualisation + Depth of research + Structure of Report
- Ensure data set is within the period specified, any references to other time periods is invalid.
- Choose 5 ransomware DLS to study in your group assignment.
- Grading will be as a team (everyone gets the same grade)
- *Peer evaluation is optional

You can refer to ransomware aggregate sites like [www\[.\]ransomlook\[.\]io](http://www.ransomlook.io) for additional information or cross referencing but you should collect the victim information **DIRECTLY from the Data Leak Sites.**

Submission should include:

- Report (.PDF) file
- Scripts that were used to scrape data from each DLS site
- Tableau (.twbx) files (**ALL Visualisations to be done via Tableau software**)

Group leader to submit on behalf of the group to NTULearn. State group name + ALL group members official NTU names in submission

**Submission due on 6 Oct 2026 by 2359hrs.
Late submission = 25% deduction from your final score.**

Introduction to Tableau

Sign up

- Download TABLEAU for students: <https://www.tableau.com/academic/students>

We offer free one-year Tableau licenses to students at accredited academic institutions through our Tableau for Students program. Receive access to our entire eLearning suite once verified.

STEPS

Step 1: Connect to your data

Learn all about the Start page and how to connect to your data.

[GO TO STEP](#)

Step 2: Drag and drop to take a first look

Get to know the Tableau workspace, learn the language of Tableau, and start examining your data.

[GO TO STEP](#)

Step 3: Focus your results

Ask deeper questions and use additional tools to refine your views and gain insights about your data.

[GO TO STEP](#)

Step 4: Explore your data geographically

Learn how to plot your data on a map to see if you can spot any trends.

[GO TO STEP](#)

Step 5: Drill down into the details

Drill down into the details of your data and learn how to create a Top filter.

[GO TO STEP](#)

Step 6: Build a dashboard to show your insights

Learn how to build and format a dashboard to display the visualizations you created.

[GO TO STEP](#)

Step 7: Build a story to present

Learn how to build and format a story to present your findings.

[GO TO STEP](#)

Step 8: Share your findings

Share your findings with your organization on Tableau Server or Tableau Online, or share them with the world on Tableau Public.

Sample Superstore Example

- Show four filters- Category, Sub-Category, Region, and Segment. These filters should have only relevant values.
- The dashboard should have the title “Executive sales”
- The first chart should have the title “YTS KPIs” and should show the following-
 - Total Discount
 - Overall Profit
 - Total Quantity and
 - Total Sales
- The second graph should have the title as “Sales” and should show monthly sales per year. Make sure it is an area chart with proper formatting.
- The third graph should the title as “Profit” and should show monthly profit per year. Make sure it is an area chart with proper formatting.

<https://medium.com/@marjanoff7/unlocking-retail-insights-an-interactive-tableau-analysis-of-superstore-data-0fba10b08305>

Solution

Step 1: Data source connection

- First, connect the sample superstore dataset to Tableau and select the “Order” sheet.
- From the Data pane, drag Order Date to the Columns shelf.
- From the Data pane, drag Sales to the Rows shelf.

When you first create a view that includes time (in this case Order Date), Tableau automatically generates a line chart.

This line chart shows that sales look pretty good and seem to be increasing over time. **This is good information, but it doesn't really tell you much about which products have the strongest sales and if there are some products that might be performing better than others.** Since you just got started, you decide to explore further and see what else you can find out.

Solution

The image shows the Tableau desktop interface. On the left, the 'Data' pane is open, displaying a hierarchy of fields from the 'Sample - Superstore' data source. The 'Order Date' field is highlighted with a mouse cursor. The 'Marks' card is set to 'Automatic'. The main view is 'Sheet 1', which is currently blank with 'Drop field here' prompts.

Sheet 1

Drop field here

Drop field here

Solution

- From the Data pane, drag Category to the Columns shelf and place it to the right of YEAR(Order Date).

Your view updates to a bar chart. By adding a second discrete dimension to the view you can categorize your data into discrete chunks instead of looking at your data continuously over time. This creates a bar chart and shows you overall sales for each product category by year.

Your view is doing a great job showing sales by category—furniture, office supplies, and technology. An interesting insight is revealed!

Solution

Double-click or drag Sub-Category to the Columns shelf.

Sub-Category is another discrete field. It creates another header at the bottom of the view, and shows a bar for each sub-category (68 marks) broken down by category and year.

Drop the Category icon into “Colour” to have it sorted by colour coding

Solution

In the Data pane, right-click Order Date and select Show Filter.

Select 2021

Repeat for Sub-category

The filters are added to the right side of your view in the order that you selected them. Filters are card types and can be moved around on the canvas by clicking on the filter and dragging it to another location in the view. As you drag the filter, a line appears that shows you where you can drop the filter to move it.

Solution

Build a map view

Start fresh with a new worksheet.

Double-click State to add it to Detail on the Marks card

Drag region to filters shelf

Drag the Sales measure to Color on the Marks card.

Solution

Note: At any time, you can click Show Me again to collapse it.

You now have a bar chart again – convert from map view

Sheet 2

Solution

Click the New dashboard button.

In the Dashboard pane on the left, you'll see the sheets that you created.

Drag sheets you created into the empty dashboard
